

# ASPIRE: THE UNIFIED POST-SALES OUTCOME ENGINE

Project: `agentic-services-workbench`

By Technical Architect, Post-Sales Engineering & Delivery

<https://aspire-platform.ai.studio/>

# Enterprise Workbench

**One Deal, Three Systems, No Shared Truth.** None of these systems share a unified model of the customer.

# THE STATIC DOCUMENT

Stale the moment they are written.

Requires manual translation and recreation.

Dead-end PDFs and Word Docs.

# THE LIVING SPEC

- Executable, live execution plans.
- ✓ Auto-updates as inputs and product versions change.
- ✓ Directly connected to task dispatch and resourcing.

A spec is a hypothesis. The fastest way to validate it is to **turn it into** an active, trackable delivery workflow.

# Enterprise Workbench

One continuous flow. No separate disconnected pages.

# Enterprise Workbench

| Input                                              | Output                                                             |
|----------------------------------------------------|--------------------------------------------------------------------|
| IF: 'SKU includes "Sentinel XDR"' ->               | GENERATE TASK: 'Deploy Sentinel agents across endpoint fleet.'     |
| IF: 'SKU includes "Sentinel SOAR"' ->              | GENERATE TASK: 'Integrate Sentinel alerts for automated response.' |
| IF: 'Environment includes "Hybrid/Multi-cloud"' -> | GENERATE TASK: 'Validate cross-environment IAM roles.'             |
| IF: 'SKU includes "Aegis SASE"' ->                 | GENERATE TASK: 'Provision Aegis Access connectors.'                |

## Honest Gaps

### Not Yet Covered

CISO audit trail requirement

Unmapped context is honestly isolated for a human to review, rather than hallucinated over.

# Enterprise Workbench

## The Sync Mechanism: Origin-Tagging

Every sync event carries an origin tag. If a system sees its own tag return, the event is dropped.

Explicit sync controls (Inbound / Outbound / Paused) live directly on the ASPIRE UI.

# Enterprise Workbench

## Assign Resource to Task

Candidate A

RECOMMENDED: Best Fit

**Maya Chen**

70% Capacity | Available in 2 days

Familiarity: Experienced in Sentinel XDR + Ransomware Response (Exact match to current deal).

Candidate B

First Available

**Jordan Wu**

100% Capacity | Available today

Familiarity: No prior exposure to this specific SKU/use-case combo.

## Recommendation Logic

A weighted recommendation engine scoring Availability against Use-Case Familiarity.

The engine recommends; a human clicks the final button.

[ASSIGN]

# Enterprise Workbench

CustomerPulse API  
(Data arrives)

## Governance Review (Human in the Loop)

Feedback Payload: Endpoint isolation policy triggered false positive.

ACCEPT → Triggers playbook update in DeliveryOps.

REJECT → Stops at the gate. Nothing synced.

Naive bidirectional sync creates chaos. Explicit human decision gates create closed-loop governance.

# 3.2x

## Conversion Speedup

Deal Closed → Solution Live (vs. manual baseline).

## TIME TO DEPLOY

Systematically reduced from weeks to days  
via deterministic task generation.

## TIME TO VALUE

Solution Live → Realized Outcome  
(measured via CustomerPulse telemetry).

## DELIVERY FRICTION

Massive reduction in manual clarification  
round-trips and engineer rediscovery hours.

Measuring business velocity, not just LLM accuracy.

# Transforming post-sales delivery from a manual bottleneck into a high-margin, scalable engine of customer success.

- Standardized baselines
- AI-driven technical agency
- Integrated human-in-the-loop governance
